Website Summary Text

Cube Summary
G-Star has maintained its detailed strategy to improve the environmental impact of its suppliers, reflected in a level 1 score of score of 100%. G-Star has maintained its supplier onboarding and ranking system and conducts site audits leading to a level 2 score of 94%. The brand has policies in place, such as its Manufacturing Restricted Substance List (MRSL), which sets limits for potentially hazardous chemicals within production. There is still opportunity for G-Star to ensure it prioritises procurement from direct and indirect suppliers with best environmental performance and to further review its suppliers colour management processes resulting in a level 3 score of 73%.

Level 1
G-Star has maintained its detailed strategy to improve the environmental impact of its suppliers and focuses on reducing suppliers’ impacts and has continued to implement Zero Discharge of Hazardous Chemical (ZDHC) policies, adopting Bluesign. G-Star has developed policies and guides such as its ‘Environmental Guideline’ which sets out its expectations for all suppliers to manage their water, energy and chemical footprints. These comprehensive activities are reflected in a level 1 score of score of 100%.

Level 2
G-Star has continued to maintain a supplier onboarding and ranking system which assesses suppliers’ environmental engagement before becoming a G-Star supplier. Beyond setting policies, G-Star conducts site audits, assessing topics such whether a supplier has an Environmental Management System through to if a supplier has an Effluent Treatment plant with adequate capacity. Resulting in a score of 94% at level 2.

Level 3
G-Star ensures that strategic suppliers maintain industry best practice chemical management standards. The brand has policies in place, such as its Manufacturing Restricted Substance List (MRSL), which sets limits for potentially hazardous chemicals within production. G-Star’s CR Director is an acting board member of ZDHC. There is still opportunity for G-Star to ensure it prioritises procurement from direct and indirect suppliers with best environmental performance and to work further with its suppliers to review colour management processes resulting in a level 3 score of 73%.

### Website Summary Text

#### Cube Summary

G-Star have a comprehensive strategy to reduce impacts created by its own operation. The brand has a team in place to drive and implement its strategy, resulting in a level 1 score of 91%. G-Star ensures that senior staff are accountable for the implementation and sets targets for GHG emissions and waste. G-Star also ensures that its team have targets to support implementation of its own operations strategy, however, there remains opportunity to further reduce GHG, water and waste impacts, particularly to define specific targets and reduction measures for water and waste. This results in a level 2 score of 59% and a level 3 score of 13%.

#### Level 1

G-Star continues to stay on top of its environmental impacts from their own operations and covers these in its overall CSR Strategy. The brand continues to recognise the water, waste and carbon impact of the business' own operations and defines actions and prioritises measures to decrease these impacts accordingly. G-Star continues to monitor and measure its organisational energy consumption throughout its own operated facilities. Additionally, the brand continues to make its internal teams aware of impacts created by its own operations and advises on reduction measures, resulting in a level 1 score of 91%.

#### Level 2

G-Star continues to ensure senior staff members are accountable for its own operations strategy and activities. G-Star has set targets for the reduction in greenhouse gas emissions and has undertaken monitoring of the impacts of waste produced and water used through its own operations. There remains opportunity for the brand to advance its waste reduction activities from previous years and to further identify water reduction measures. Resulting in a score of 59% for level 2.

#### Level 3

G-Star has set role specific targets of its own operation goals and continues to demonstrate that the brands preferentially occupies buildings with a reduced environmental impact. There is potential for the brand to further implements water and waste reduction programmes throughout its own operations. Furthermore, there is opportunity for G-Star to demonstrate that their GHG monitoring process is measured in accordance with industry standards and to brand to offset remaining greenhouse gas emissions. These activities have resulted in a score of 13% at level 3.
